WILLIAM ISRAEL CASTAÑO BALANTA

Software Architect & AI Engineer | Senior Full Stack (Java · Spring Boot · RAG)

Cali, Colombia | williamisrael210@gmail.com | +57 302 342 4366

Portfolio: willcast7.github.io/portf | **LinkedIn:** linkedin.com/in/willcast7 | **GitHub:** github.com/willcast7

PROFESSIONAL SUMMARY

Software Architect and AI Engineer with 10+ years in technology and 6+ years building software end to end, specialized in Java/Spring Boot backend, financial platform integration and applied AI (RAG and local LLMs). **Served as software architect for banking services at Banco BTG Pactual** (C4 model and Specification-Driven Development) and, independently through AureaLab, takes B2B products from idea to production, including RAG-powered search engines. Experience in banking and fintech (ISO 8583, REST APIs, AWS, Azure, SAP, WhatsApp Business API), focused on quality under ISO 25010 and accelerated delivery through AI-assisted development.

TECHNICAL SKILLS

Architecture: C4 Model · Microservices · DDD · MVC · Monolithic Architecture · Layered Architecture · ISO 25010 · SOLID Principles · REST API Design · Enterprise Integrations

Artificial Intelligence: RAG · pgvector · Spring AI · Local LLMs (Ollama, LM Studio) · Conversational Bots · AI-Assisted Development (Kiro, Claude Code, OpenCode, Antigravity) · AI Agent Harnesses

Backend: Java (Spring Boot, Spring WebFlux) · TypeScript (Node.js) · Python (Pandas) · C# · PHP · WebSockets

Frontend: Angular · React · Vue · JavaScript

Cloud & DevOps: AWS · Azure · Docker · Docker Compose · Nginx (reverse proxy) · SSL · GitFlow · VPS

Databases: PostgreSQL · SQL Server · MySQL · MongoDB

Integrations: ISO 8583 · WhatsApp Business API · SAP · Yeastar · Binance

Methodologies: Specification-Driven Development (SDD) · Organic Driven Development (ODD) · AI-Driven Development · Scrum · Kanban · Kaizen

PROFESSIONAL EXPERIENCE

PersonalSoft (client: Banco BTG Pactual) *Nov 2025 – Nov 2026*

Software Architect / Senior Developer

- Defined and documented the architecture of banking services using the C4 model (levels 1–3) and end-to-end flow diagrams, unifying the technical vision of the ecosystem across multiple teams.
- Established architecture guidelines and functional specifications with Kiro under Specification-Driven Development (SDD), aligning business and engineering.
- Accelerated delivery of mission-critical backend services through AI-Driven Development practices while safeguarding maintainability and code quality.
- Audited integrations with external financial products and executed refactoring plans that improved system performance and stability.

AureaLab *Jul 2021 – Present*

Independent Software Architect & Developer

- Build custom software for B2B clients, managing the full lifecycle of products such as InvSalud (pharmaceutical inventory) and Cabala (cash control and operations).
- Designed search and document-processing engines with RAG architecture, using pgvector, Spring AI and local language models (Ollama).
- Automated production deployments with Docker, Docker Compose, Nginx as reverse proxy and SSL certificates on VPS servers.
- Developed automated multichannel notifications with scheduled tasks in Spring Boot, WebSockets and WhatsApp Business API.

GVS Colombia *Jan 2025 – Nov 2025*
Software Engineer

- Led the integration of mission-critical APIs (WhatsApp, SAP, Yeastar) with the core of the company's internal products.
- Designed and implemented AI-powered conversational bots (including local LLMs with LM Studio) to automate customer service and corporate processes.
- Refactored legacy applications applying SOLID principles, enabling technology migrations with no service downtime.

Punto Red *May 2022 – Aug 2024*
Full Stack Developer

- Orchestrated the integration of banking services using ISO 8583 and REST APIs, and led the API-fication and migration of critical platforms to AWS.
- Automated operational processes with Python and Pandas, reducing manual processing time.
- Led frontend development of customer self-service portals, faithful to the UX/UI designs defined by the business.

Spartan Hill / SIESA / Grupo Empresarial MR *2015 – 2022*
Full Stack Developer & DBA

- Led the technical integration with Binance and AWS for Plutowallet, a crypto-asset platform.
- Executed PHP-to-C# migrations for clinical software ecosystems.
- Automated deployments of corporate Java software and administered SQL databases.

EDUCATION

B.Sc. in Computer Engineering (Ingeniería en Informática) | Universidad de Cataluña | *In progress (final semesters)*
Software Programming | MinTIC | *2022*
Systems Technician | SENA | *2012*

LANGUAGES

English: B2, focused on technical communication in software engineering | **Spanish:** Native
